

CNC Vertical Glass Drilling, Milling, Countersink machine

Over 23 years' experience glass machinery company in Asia. More than 70 countries and regions customer basis. CNC glass drilling and milling machine is the perfect equipment for man-machine automation. It integrates the processing technology of ordinary vertical drilling machine drilling, water-jet milling and CNC machining center edging, and combines CNC numerical control technology. Achieve processing accuracy and stable quality. All procedures are installed at one time, and processing is completed at one time according to the optimized and set process route by default, which improves work efficiency. This type of processing production line program is upgraded to the field of artificial intelligence automation. It can process architectural glass such as frameless doors, bathroom doors, glass curtain walls, glass guardrails, staircase glass, etc. It is the first choice for CNC processing equipment in this field.
